Welcome Message
**Executive Chairman of The 3rd International Conference on Security in Food,
Renewable resources, and Natural Medicines (SFRN) 2019**

Dear Honorable ladies and gentlemen,

Good Morning and Assalamu'alaikum wr.wb

On behalf of the SFRN 2019 organizing committee, I am really honoured and delighted to welcome all of you to the 3rd International Conference on Security in Food, Renewable resources, and Natural Medicines (SFRN) 2019 at the State Polytechnic of Agriculture Payakumbuh, West Sumatra Indonesia

Our technical program is rich and varied with 8 keynote speeches and 4 invited talks and more than 170 technical papers split between 8 parallel oral sessions and 1 poster sessions. The speakers and participants came from 8 different countries, consist of Academicians, Scientists, Researchers, Practitioners, Professionals, and Government Officials in multidiscipline branch of knowledge, who gathered here today to share and discuss new findings and applications of innovations for promoting Food Security, Renewable Energy, Sustainable Resources and HealthCare Free for All, in particular for those who in needs. As the chairman of conference 2019 SFRN, I know that the success of the conference depends ultimately on the how many people who have worked in planning and organizing both the technical program and supporting social arrangements. This year, the conference is jointly organized by the Payakumbuh State Agricultural Polytechnic and Andalas University. We also thank to the steering committee for their wise and brilliant advice on organizing the technical program; and also to the the Program Committee, both from the Payakumbuh State Agricultural Polytechnic and Andalas University, for their thorough and timely reviewing of the papers and to the Director of Payakumbuh State Agricultural Polytechnic and the rector of Andalas University, and the Head of the Institute for Research and Community Service of Andalas University, and Payakumbuh State Agricultural Polytechnic. Our recognition should go to the Organizing Committee members who have all worked really hard for the details of the important aspects of the conference programs and social activities, and then we extend our gratitude to our students who bore the arduous burden for preparing this event.

We hope this event is also a good step in gaining strengthened cooperation between our universities as we know that the State Agricultural Polytechnic of Payakumbuh is part of the Andalas University previously, of course the psychological relationship between the State Agricultural Polytechnic and the Andalas University is really close.

Finally on behalf of the committee, we apologize profusely for all the shortcomings and everything that is not properly in organizing this event and hopefully AES-Network contributes significantly to the research and technology for the good of humanity.

Thank you

Fithra Herdian, S.TP, MP

**Message from Afro-Eurasia Scientific (AES) Network
3rd International Conference on Security in Food, Renewable resources, and
Natural Medicines (SFRN) 2019**

Dear Honorable and Distinguished guests,
Ladies and gentlemen,

Assalamu'alaikum Warahmatullahi Wabarakatuh and Good Morning

On behalf of the AES Network, I am honored and delighted to welcome you to the 3rd International Conference on Security in Food, Renewable resources, and Natural Medicines (SFRN) 2019 at the Agricultural State Poly Technique of Payakumbuh, Indonesia. I believe we have chosen a venue that guarantees a successful technical conference amid the culture, delicacy and scenery of Payakumbuh, the city of “Rendang”.

The AES-Network aims to Promote Livelihood Through Food Security, Promote Future Smart and Green Mobility by Using Renewable Energy, Promote Prosperity by Equally Managing and Distributing the Sustainable Resources and Promoting Enjoyable Long-Life by using Natural Medicines With Free Health Care For All. The AES-Network was established in 2018 and already have memberships from 12 countries. Our members consist of Academicians, Scientists, Researchers, practitioners, professionals, and government officials from multidiscipline branch of knowledge, who gathered and contributed their expertise to share and discuss new findings and applications of innovations for promoting Food Security, Renewable Energy, Sustainable Resources and Free Health Care for All. In particular, the network aims to alleviate the condition of those who in dire needs. In the future, we also expect to provide technical demonstrations, and numerous opportunities for informal networking for Promoting Food Security, Renewable Energy, Sustainable Resources and Free Health Care for All. In this opportunity, we invited you to become our members and join our efforts for a better life to all of mankind.

As a team, we acknowledge the existence of mutual interest among university and college educators, researchers, activists, business sector, entrepreneurs, policy

makers, and all society members. We must promote the need to strengthen cooperation for establishing Security in Food, Renewable Resources, and Natural Medicines in Africa, Europe, and Asia.

The AES-Network believe, a firm foundation for mutual collaboration with the spirit of equality and partnership and thereby contribute towards sustainable development in these three regions.

Therefore, through networking, friendships, and joint efforts, the capacity of our network can be enhanced to address major challenges in securing the Food, Renewable Resources, and Natural Medicines in Africa, Europa, and Asia. Our Network goals are to increase the awareness of educators, researchers, scientific community, business sector, entrepreneurs, and policy makers in Africa, Europa, and Asia, that the future of a better world, lies within their responsibilities, and to improve the networking, mobility and mutual collaboration of scientific community, business sector, entrepreneurs, and policy makers in Africa, Europe, and Asia to energize the delivery of Sustainable Development Goals.

Finally, I hope that, by registering our network, you will be provided a common platform and support the exchange of knowledge, while at the same time, we offer constructive dialogue across and within the various interest and stakeholder groups, including the intended beneficiaries, and arrived at the best solutions to our terminal goal, Promoting Food Security, Renewable Energy, Sustainable Resources and Free Health Care based on scientific evidence in Africa, Europa, and Asian region.

Thank You for Joining us!

President

Assoc. Prof. Dr. Eng. Muhammad Makky

Welcome Message
Head of Institute for Research and Community Service
Universitas Andalas

Dear Honorable and Distinguished guests,
Ladies and gentlemen,

Assalamu'alaikum Warahmatullahi Wabarakatuh and Good Morning

It is with great pleasure that I welcome the participants of the SFRN 2019 in Payakumbuh, the city of “Rendang”, the prime of Indonesian delicacy.

In this esteem event, we share the knowledges, and imparted it to the people. The quest for knowledge has been from the beginning of time but knowledge only becomes valuable when it is disseminated and applied to benefit humankind. It is hoped that this conference will become a platform to gather and disseminate the latest knowledge which can be adopted for securing the food, resources, and health for mankind, in Asian, European and African region.

Academics, Scientists, Researchers and practitioners from multidiscipline branch of knowledge who gathered here today will be able to share and discuss new findings and applications of innovations for ensuring food security, in particular for those who reside in developing countries. It is envisaged that the intellectual discourse will result in future collaborations between universities, research institutions and industry both locally and internationally. In particular it is expected that focus will be given to issues on environmental and sustainability. Therefore, we urge to all participants, to establish a scientific network that will voice the needs

Researchers in the multi sectoral aspects related to the benefit of mankind have been progressing worldwide. Food is a basic right, while energy drive the world. Human need a lot of resources so the civilization can be flourished. But human is not immune, and thus, ones need to take care of their health regularly. Modern Agri-food systems is the foundations of a decent life, a sound education and the achievement of

the Sustainable Development Goals. Over the past decade, we have witnessed a chain reaction that threatens the very foundations of life for millions of the world's people. Rising energy prices drove up the cost of food and ate away the savings that people otherwise would have spent on health care or education. Unsustainable plantation management induced forest fire and posed haze hazard to the whole Sumatra island and our neighboring countries.

The human cost of the food and energy crisis has been enormous. Millions of families have been pushed into poverty and hunger. Thousands more suffering from the collateral effects. Over the past year, food insecurity led to political unrest in some 30 countries. Yet because the underlying problems persist, we will continue to experience such crises, again and again -- unless we act now. That is why we are here today.

We must make significant changes to feed ourselves, and most especially, to safeguard the poorest and most vulnerable. We must ensure safety nets for those who cannot afford food, or energy, nor even a health service. We must transform agricultural development, markets and how resources is distributed. We must do so based on a thorough understanding of the issues. That is the only possible way we can meet the Goals of Sustainable Development.

Thank You,

Assoc. Prof. Dr.-Ing. Uyung Gatot S. Dinata,MT.

**Opening Ceremony
Rector of Andalas University**

Dear Honorable and Distinguished guests,
Ladies and gentlemen,

Assalamu'alaikum Warahmatullahi Wabarakatuh and Good Morning

I welcome the opportunity to address you at this important event.

It gives me great pleasure in welcoming you to this 3rd Conference on "Security in Food, Renewable resources, and Natural Medicines (SFRN)" 2019. I am delighted that so many have accepted our invitation. I am particularly happy that we have in this room, dedicated individuals from so many stakeholder groups — including our most respected and distinguished guest “The ministry of Agriculture of the Republic of Indonesia”. We also welcome the mayor of Payakumbuh and the Regent of Lima Puluh Kota. We extend our welcome to the civil society, the private sector, international organizations; the science community; and others dedicated to help create an environment in which people can escape food insecurity. Imagine what we can do together if we make the security for all as an our top priority, and pull in the same direction. We can make a difference in the lives of millions.

Food is a basic right. Food security are the foundations of a decent life, a sound education and the achievement of the Sustainable Development Goals Access to medicines - a fundamental element of the right to health. Health is a fundamental human right, indispensable for the exercise of many other rights in particular the right to development, and necessary for living a life in dignity. Moreover, human rights principles and language are being used to support resource access claims as rights-based approaches empower individuals and groups to gain or maintain access to natural resources

Much progress has been made during the last decades but much more needs to be done. Millions of people are Insecure worldwide, meaning that they either starve or they do not know from where their next meal, health care or resources will come.

Much of the progress on security has occurred at the expense of our environment. With business as usual, we foresee that the production improvements during the next decade will be less than the last one, while the environmental degradation will continue, and health will deteriorate significantly. Without available resources to seek, mankind will become endanger species in a very short time.

Solutions to the security problems need to be designed and implemented within a new and rapidly changing environment. Globalization and sweeping technological changes offer new opportunities for solving these problems. A number driving forces or trends must be taken into account in developing appropriate action. Some of the action needed, such as appropriate technology for small farms, is not new but it must be cast in the new and changing global and national environment, taking into account new opportunities and risks. I hope that by providing a forum for knowledge exchange, this conference will help identify the action to be taken. Furthermore, this conference will help to provide constructive dialogue across and within the various interest and stakeholder groups, including the intended beneficiaries, and arrive at the best solutions.

In conclusion, even if those responsible give high priority to achieving sustainable security for all and back it up with action, the world may not achieve the goal by 2030. But we will be much closer than with business as usual. I urge all of us to provide the strongest support for this event, to enable securing the food for all in the closest time possible. It is my sincere optimism that through the accomplishment of the objectives of this event, we will come to an important step nearer to secure the food for all.

Finally, I would like to thank the organizing committee who have spent their utmost efforts to prepare and manage this event successfully. Let me conclude my remarks by wishing our guests happiness, good luck and great success in the conference.

May I announce now the opening of the “3rd International Conference on Security in Food, Renewable resources, and Natural Medicines (SFRN) 2019” in Payakumbuh.

Thank you.

Rector,
Prof. Tafdil Husni, SE, MBA, PhD

Welcome Message
Director of Politeknik Pertanian Negeri Payakumbuh

Dear Honorable ladies and gentlemen,

Good Morning and Assalamu'alaikumwr.wb

I congratulate to all participants on the invitation and participate at our beloved campus Payakumbuh State Agricultural Polytechnic. I feel really honoured to welcome all of you at our event, the 3rd International Conference on Security in Food, Renewable Resources, and Natural Medicines (SFRN) 2019 at the Payakumbuh State Agricultural Polytechnic, Indonesia.

Food security is a very important aspect in a country's sovereignty. Food also determines the future direction of a nation. Many social and political fluctuation can also occur if food security is disrupted. Food availability that is smaller than its needs can create economic instability. This critical food condition can even endanger economic and national stability. In the current situation, there are many challenges in exteriorize food security, such as climate change, population, limited natural resources and other challenges both locally, regionally and globally.

Renewable resources are also our starting point to start sustainable development. Research on renewable resources is also very important as the solution in meeting the principles of sustainable development. As we know that Sustainable development is the development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

Sustainability is the foundation for today's leading global framework for international cooperation - the 2030 Agenda for Sustainable Development and its Sustainable Development Goals (SDGs)

The discovery of treatment based on local culture also contributes greatly to the good of humanity. Unfortunately, there are still many treatments that have not been carried out by scientific research. So, through this conference we hope it can be a trigger to increase in traditional plant-based treatments that not go through complex

chemical processes, so that the effectiveness of the pillars can be further suppressed and also contribute to the community's economy.

Finally, I would like to express my gratitude to all people who involved in organizing this event and to all of stakeholders who have helped to make this event go on successfully. Please accept my apologize for any shortage, Assalamu'alaikumwr.wb.

Thank you

Ir. Elvin Hasman, MP

Abstract—This study aims to determine the sub-district base area and land carrying capacity index for buffalo development in Sijunjung Regency. It was conducted in Sijunjung in June-August 2019 and used a literature study method to collect the data and also to collect data from Livestock and Fisheries Office, Central Bureau of Statistics of Sijunjung Regency, and others related Offices. The result showed that the sub-district bases for buffalo developing are Kecamatan Koto VII and Kecamatan Sijunjung with LQ 1.55 and 1.29. The land carrying capacity index is 4.4, which means Sijunjung Regency is a safe area for buffalo development.

Keywords: Base, Land Carrying Capacity, Buffalo

INTRODUCTION

Increasing population and public awareness of the fulfillment of nutritional needs, making the demand for meat products always increase every year. In 2015, the Indonesian people's meat consumption per capita per year was 6.413 kg, an increase of 5.69% in 2016 to 6.778 kg (Dirjen PKH, 2017). But the rise in consumption is not supported by the rise in domestic production so that the number of imports remains high each year. According to the Directorate General of Animal Husbandry and Animal Health (2018), Indonesia still imports 403,668 tons of beef or about 30.1% of the national meat needs and 80,000 tons of buffalo meat.

This condition becomes an irony, considering that Indonesia is famous as an agrarian country that has a vast area, a lot of labor, and a climate suitable for livestock development. Various efforts and programs have been carried out by the government to meet the needs of the meat, such as the self-sufficiency program for beef and buffalo, Upsus Siwab (special effort for mandatory breeding cattle), regional-based development, but to date, it has not been successful.

In every program implementation, West Sumatra Province has always been the main supporting area. This province is one of the areas of animal husbandry development in western Indonesia, especially cattle and buffaloes. In supporting and discussing this study, several regions have been designed as areas for animal husbandry development centers, so that the development process can be focused and continuous. One such area is Sijunjung Regency as a center for buffalo breeding development area.

The population of buffalo cattle in Sijunjung Regency in 2017 was 14,813 individuals. If seen in the last ten years (2008-2017), as is the case with the national

population, the buffalo population in this district has also decreased. But the decline was relatively small, at an average of 1.49 per year (BPS, Sijunjung Regency).

In this district, there is also the largest cattle market in West Sumatra, the Palangki Livestock Market in district IV Nagari. In this market, they are gathering and transacting cattle traders and buyers across cities in West Sumatra and across provinces, such as: from Riau, Jambi, Bengkulu, and Lampung.

As a development center area, of course, the budget and activities will be more allocated to this district. The potential of the region must be known in more detail so that the development and development process carried out on target and the targeted development stages can be actualized according to plan. Moreover, this district is vast, reaching 3,130.8 km², hilly, and partly still forested. Therefore, the authors are interested in studying to determine the base and non-base areas of buffalo cattle development and to know the regional carrying capacity in terms of feed availability in the development of buffalo cattle.

Research Objectives

- a. To find out the buffalo livestock development sub-district in Sijunjung Regency.
- b. To find out the land carrying capacity index in Sijunjung Regency for the development of buffalo.

RESEARCH METHODOLOGY

Place and Time of the Research The

The Research was conducted in Sijunjung Regency, from June to October 2019.

Research Methods

This research uses library research methods. A literature study is the collection of data and reports from the Department of Animal Husbandry and Fisheries of Sijunjung Regency, Central Statistics Agency of Sijunjung, other relevant agencies.

Research Variables

- a. Determining the subdistrict base used for buffalo breeding development, the variables are buffalo population in each district, RTP in each area, buffalo population in Sijunjung Regency, and RTP in Sijunjung Regency.
- b. Finding out the value of the carrying capacity index of Sijunjung Regency in the development of buffalo farms, the variables are the total potential of feed and the whole need for feed.

Data Analysis

- a) The first variable will be analyzed using the following formula:

$$\text{When } LQ_{ij} = \frac{X_{ij} / X_{i.}}{X_{.j} / X_{..}}$$

D. Sustainable Resources

- X_{ij} : the degree of j-activity in the i-th region
 X_i : total activity in the Xth region
 $X_{.j}$: total jth activity in all regions
 $X_{..}$: the degree of total area activity

b) The second variable uses the following formulas:

To calculate the Regional Bearing Capacity Index the formula, the researcher used the following formula:

$$IDD = \frac{\text{Total Potensi Pakan yang Tersedia (BKC)}}{\text{Total Kebutuhan Pakan (BKC)}}$$

The total potential of feed (BKC) = Number of Feeds from Agricultural Waste + Total Natural Forage Production by Land Use

The total need for feed = Livestock population (ST) x K

where:

$$K = 2.5\% \times 50\% \times 365 \times 25 \text{ kg} = 1.14 \text{ tons BKC / year / ST}$$

Description:

K = Minimum feed requirements for 1 ST (in tons of material or also called DDM (*digestible dry matter*)) for 1 year

2.5% = The minimum requirement for the amount of feed forage (dry matter) to body weight

50% = Average value of digestibility of various types of plants

365 = Number of days in one year

250kg = Amount of biomass for 1 unit of livestock (ST)

RESULTS AND DISCUSSION

General Condition of Research Area

Sijunjung Regency is one of 19 (nineteen) districts/cities in the Southern part of West Sumatra Province, located between $0^{\circ} 18'43''$ LS - $1^{\circ} 41'46''$ LS and $100^{\circ} 46'50''$ East - $101^{\circ} 53'50''$ east longitude with an altitude of sea level between 100 - 1,250 meters ⁽¹⁾. Sijunjung Regency is in the eastern part of West Sumatra Province, on the main route that connects Riau Province and Jambi Province. Considering its location at the intersection of these lanes, Sijunjung is an economic and tourism route. Administratively, the area of Sijunjung Regency is 313,080 Ha includes eight districts, sixty-one Nagari and one village with 263 Jorong, whose territory is bordered by:

North Side: Tanah Datar regency

South side: Dharmasraya regency

West Side: Solok Regency and Sawahlunto City

East side: Regency Kuantan Singingi, Riau Province

Topographically, Sijunjung Regency is a series of hills extend from the northwest-southeast direction. The regional morphology is divided into 3 (three) parts, the steep area in the west and east, the flat area in the middle, and the sloping hills located in between. In terms of height, the dominance of the Sijunjung Regency is at the lowest altitude between 120 - 130 m above sea level and the highest between 550-930 m. Sijunjung Regency as a whole is at the lowest and highest altitude around 100 meters to 1,500 meters above sea level.

Climatic conditions in Sijunjung Regency classified as wet tropical types with rainy and dry seasons that change throughout the year. Climatic conditions are temperatures with a minimum temperature of 21 ° C and a maximum temperature of 37 ° C. Average rainfall based on six monitoring points 13.61 mm / day for each month.

In this district, there are almost all types of livestock raised in West Sumatra, except for dairy cattle and pigs. There are no dairy cattle developed here because it is not popular in the community, and some areas are not suitable agro-climatology. The distribution of the population of each livestock described in the following table:

Table 3: Population of Livestock in Sijunjung Regency 2015-2017 (head)

Type of Livestock	Jumlah			Growth Rate (%)
	2015	2016	2017	
Beef Cattle	17.701	18.033	16.961	-2,03
Dairy Cattle	0	0	0	0
Buffaloes	14.977	15.307	14.813	-0,51
Swine	0	0	0	0
Goat	12.885	11.639	13.847	4,65
Lamb	1.982	1.907	1.870	-2,86
Native Chicken	237.074	280.524	197.668	-5,60
Broiler	1.096.050	995.660	1.000.000	-4,36
Laying	45.250	54.000	63.445	18,41
Ducks	27.887	25.254	23.895	-7,41

Source: BPS Kab. Sijunjung 2018

The table above explains that generally, the livestock population in Sijunjung Regency has decreased in the last three years. Only goats and laying hens increased. However, for buffalo cattle, the decline is relatively small at an average of 0.51% per year, lower than the national decrease in buffalo population, which is 0.58% per year (BPS, 2012).

Development Base of Buffalo Farm in Sijunjung Regency

In this study, the determination of the establishment of buffalo cattle husbandry's development base areas conducted through LQ analysis. LQ analysis is

an index to compare the share of sub-regions in certain activities with the total amount of those activities in the overall operations of the region. In this case, certain activities in the sub-region are classified as the buffalo population. The population in the sub-district and the total activity in the overall area activity is buffalo population and population in the district. The LQ analysis results can be seen in the following table:

Table 4: LQ Analysis of Buffaloes Development in Each District in Sijunjung

No	Districts	Buffalo Population	Number of Population	LQ
1	Kamang Baru	1.810	49.359	0,57
2	Tanjung Gadang	1.066	24.977	0,66
3	Sijunjung	3.805	45.951	1,29
4	Lubuk Tarok	762	15.205	0,78
5	IV Nagari	1.369	16.932	1,26
6	Kupitan	1.155	13.977	1,28
7	Koto VII	3.771	37.902	1,55
8	Sumpur Kudus	1.075	25.801	0,65
Total		14.813	230.104	

Source: Data Processing, 2019

Results of the analysis of buffalo breeding LQ in Sijunjung Regency, as shown in the table above, explains that four subdistricts have a value of $LQ > 1$. If $LQ > 1$. Then the area is called the base sector. The sector whose specialization level is higher than the status of the reference area. Of the four sub-districts, there are two sub-districts with the highest LQ values, namely Koto VII and Sijunjung Districts, with LQ values of 1.55 and 1.29.

3.3. Land Carrying Capacity for the Development of Buffalo in Sijunjung Regency

Bearing to find out the carrying capacity index of buffalo cattle can be measured by calculating the total available feed potential divided by the full feed requirements. The possible feed potential and animal feed requirements are calculated not only for buffaloes but for ruminants (buffalo, cattle, goats, and sheep). Ruminantia is a plant-eating animal that digests its food in two steps: first, by swallowing raw materials, then removing the half-digested food from its stomach and chewing it again or better known for ruminating.

A. The Total Potential of Feed

Livestock feed can be produced from agricultural waste and natural forages available on existing land. Agricultural wastes that used as animal feed are rice, corn, peanuts, green beans, soybeans, sweet potatoes, and cassava. For Sijunjung Regency, agricultural residues that can be utilized as ruminant animal feed are as follows:

Table 5: Number of Feeds from Agricultural Waste

No	Type of Waste Food	Crop Production Plant (Ton / Yr)	Waste Production (Ton / Yr)	Digestibility	Production Waste (BKC / Ton / Yr)
(a)	(b)	(c)	(d)	(e)	(f)
1	Rice Paddy	88.468	88.468	0,2	17.694
2	Corn	1.880	3.760	0,2	752
3	Green Beans	5	10	0,25	3
4	Peanuts	27	54	0,25	14
5	Cassava	443	28	0,3	8
Total					18.470

Source: Results of Data Processing, 2019

From the table above, it can be seen that agricultural waste in Sijunjung Regency can produce the animal feed of 18,470 tons of BKC / Year.

While the forage that can be produced by existing land can be seen from the use of paddy fields, dry land, plantations (rubber, oil palm), land, dry fields, fields, community forests, pasture fields, and others. More in the table below:

Table 6: Total Natural Forage Production by Land Use in Sijunjung Regency

No	Land Use	Area (Ha)	Forage Feeding Productivity (Ton / Ha / Yr)	Conversion Factor	Production(Ton / BKC / Yr)
(a)	(b)	(c)	(d)	(e)	(f)
1	Rice fields	10.220	1,25	1	3.194
2	Dry Land	7.872	2,975	2	11.710
3	Plantation	47.758	3	2	71.637
4	Yard	5.228	0,53	2	1.385
5	Fields Gardens /	15.586	2,875	1	11.202
6	Community Forests	19.953	0,6	1	2.993
7	Other	17.905	0,75	1	3.357
Total					105.478

Source: Results of Data Processing, 2016

From the table above illustrates that the production of natural forages that can be produced by land in Sijunjung Regency is 105,478 tons of BKC / year. This amount is a potential forage that can be produced by land use, as illustrated in the table above.

After knowing the potential of feed originating from agricultural waste and natural forage production, the total feed availability in Sijunjung Regency is obtained by adding up the results of both. From the sum, the overall availability of animal feed obtained in Sijunjung Regency is 123,948 tons of BKC / year. Learn more in the following table:

Table 7. Total Potential Forage in Sijunjung (Ton / BKC / year)

Number of Feeds from Agricultural Waste	Total Natural Forage Production by Land Use	Potential Total Feed
18 470	105 478	123 948

Source: Data Processing, 2019

B. Ruminant Animal Feed Needs

Based on the formula contained in the research methodology, the ruminant animal feed needs in Sijunjung District are as shown in the following table:

Table 8. Ruminant Animal Feed Needs in Sijunjung District (BKC tons/year)

No	Type of Livestock	Population	Factors	Amount (ST)	Needs Feed (ST)	Total
(a)	(b)	(c)	(d)	(e) = (c)* (d)	(f)	(g) = (e)*(f)
1	Beef Cattle	16.961	0,7	11.872,70	1,14	13.534,88
2	Dairy Perah	0	0,7	0,00	1,14	0,00
3	Buffalo	14.813	0,8	11.850,40	1,14	13.509,46
4	Goat	13.844	0,06	830,64	1,14	946,93
5	Sheep	1.870	0,05	93,50	1,14	106,59
	Total			24.647,24		28.097,85

Source: Results of Data Processing, 2019

From the above table, it can be explained that the current need for ruminant animal feed in one year in Sijunjung Regency is 28,097.85 tons of BKC / year.

C. Land Carrying Capacity Index

Land carrying capacity index in developing ruminants farms is obtained by dividing the total available feed potential by the current total feed requirements. The value obtained is IDD 4.4. It means that Sijunjung Regency is in the safe region in the development of ruminant farms because it has an $IDD > 2$. One of the ruminants is buffalo cattle.

CONCLUSIONS

- a. The base districts for buffalo breeding development in Sijunjung Regency are Koto VII District and Sijunjung District with LQ index values of 1.55 and 1.29.
- b. The carrying capacity index of the Sijunjung Regency in buffalo cattle development is 4.4, which depicts that Sijunjung Regency is in the safe region in the development of buffalo ranches (ruminants).
